## INSTALLING DOCKER:

Installing Docker Desktop 4.13.0 (89412)

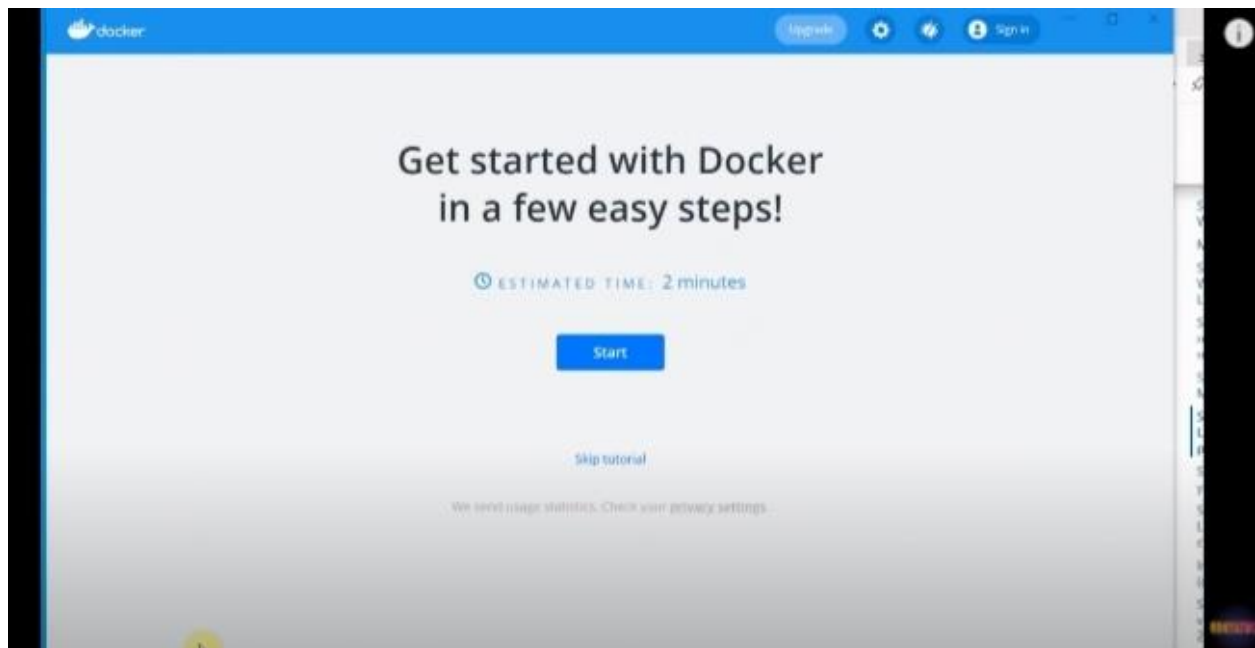

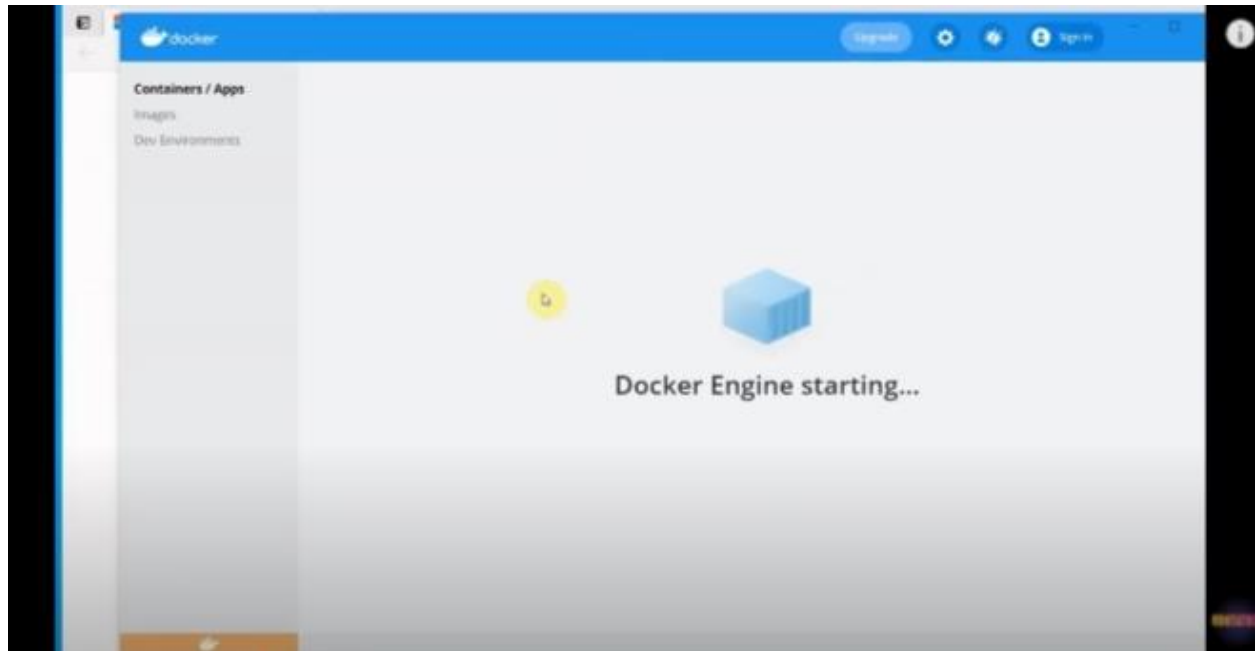

### Docker Desktop

Initializing...

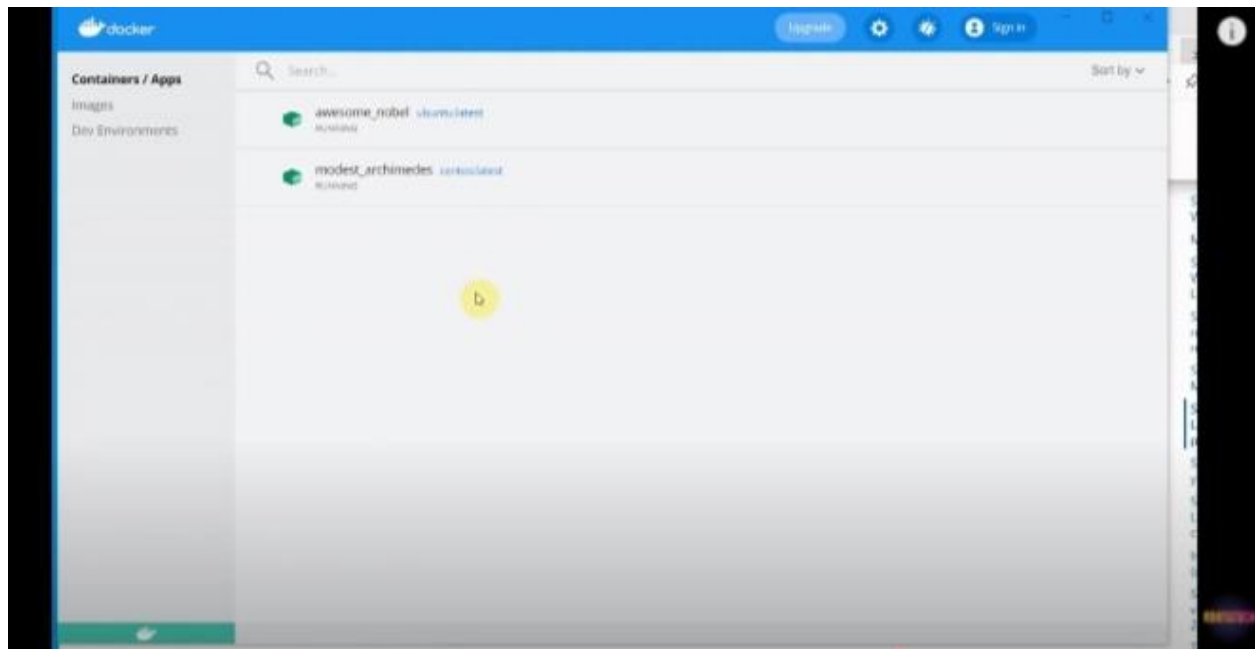

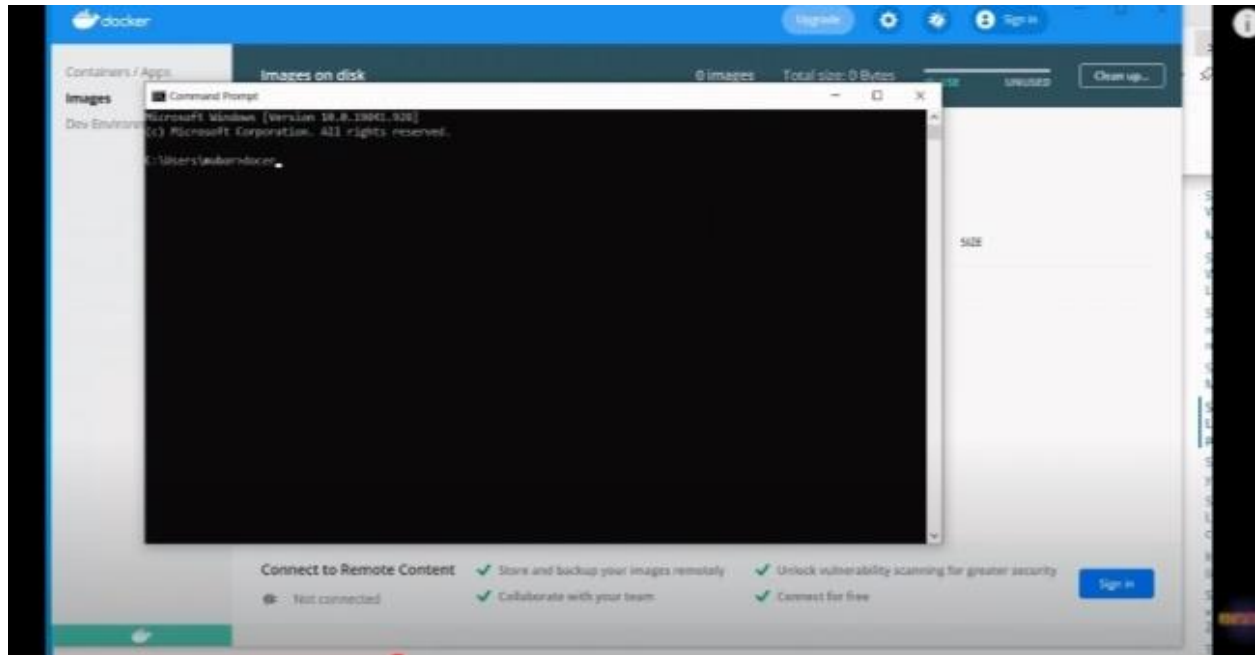

Verifying package

A screenshot of a web browser window displaying the Microsoft documentation page for WSL 2 kernel updates. The page title is "Step 4 - Download the Linux kernel update package". The content includes instructions on how to download the latest package. Overlaid on the page is a "Windows Subsystem for Linux Update Setup Wizard" window, which is a "Welcome" screen for the "Windows Subsystem for Linux Update Setup Wizard". It features a penguin icon and the text "WSL". Below the wizard window, a "Docker Desktop" error message is displayed, stating "WSL 2 installation is incomplete." and providing a link to the kernel update page. The error message also mentions that the WSL 2 Linux kernel is now installed using a separate MSI update package and provides a link to the kernel update page: <https://aka.ms/wsl2kernel>.
